

## RING SIZE GUIDE

Our guide allows you to define the ideal size of the ring you want to put on your finger.

ORITAGE offers you two methods to measure your ring size:

- Measuring an existing ring
- Measuring from your finger

Then you will find a table of correspondence between measurements and ring sizes to choose your ideal size.

## MEASURING AN EXISTING RING

If you have a ring that suits you perfectly, you can measure its inner diameter in millimeters with a ruler according to the image below.

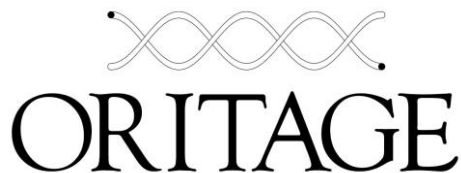

## MEASURING FROM YOUR FINGER

You can set the value of the ring size by directly measuring the circumference of your finger.

Please wrap the base of your finger with string or ribbon. Make a mark at the intersection of the string or ribbon. Then unroll the string or ribbon and measure the distance between the marks in millimeters with a ruler.

Some tips to choose the most suitable & comfortable ring size for your finger:

- Measure your finger several times a day
- Avoid measuring your finger in extreme conditions (for example, if your finger is too cold or wet).
- It is recommended to measure the circumference of the largest finger joint: this will allow you to put on or take off the ring easily.
